## Explanation of approach

The PROJECT GENERAL COMPANY data center due diligence is a comprehensive review that focus on the existing critical infrastructure and operations.

For topology, this part of the review assess a sites strategic value in terms of providing a stable and secure environment for a data center to house client equipment as it identifies **risk** to a client's critical infrastructure. *We evaluate onsite in order to move past the veneer and into the actual running of the facility.*

This approach is applied as a comprehensive view and offers value for clients that are:

- Strategic planning for data center operations (Primary DC/DRP/Backup DC)
- Change management to move to a different service provider
- Third party assessment of a data center facility
- Consolidating a portfolio
- Upgrading a design or facility for a data center
- Selling, investing in, or purchasing a data center

The evaluation reviews as found conditions and the sustainability of the current operations:

- The focus of this evaluation is power, cooling, and space as it is a constrained and a possible opportunity
- Ability of the sites critical infrastructure in terms of the ability to meet or exceed the client's needs
- Vendor neutrality as the PROJECT GENERAL COMPANY ' s role is to view sites in terms of TIER compliance, operational sustainability (3 to 5 years) , and safety and security.

The PROJECT GENERAL COMPANY uses the (PMBOK) framework to manage projects.

The PMBOK® integrated PMO and project management knowledge enables companies to:

- Establish proper project management planning by applying PMBOK knowledge areas
- Monitor and control project progress including; scope, schedule, and cost
- Apply techniques to predict and prevent problems
